Chapter 1

Hierarchical Index

1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

AppDelegate()	7
BTSendRec()	11
<CBCentralManagerDelegate>	
BTDiscover	7
<CBPeripheralDelegate>	
BTSendRec	9
<CLLocationManagerDelegate>	
RouteInfoViewController	12
<MKMapViewDelegate>	
RouteInfoViewController	12
NSObject	
BTDiscover	7
BTSendRec	9
Database	11
RouteInfoViewController()	13
SettingsViewController()	15
SyncDataViewController()	16
<UIApplicationDelegate>	
AppDelegate	7
UIResponder	
AppDelegate	7
<UITableViewDataSource>	
RoutesViewController	14
RoutesViewController()	14
<UITableViewDelegate>	
RoutesViewController	14
RoutesViewController()	14
UIViewController	
RouteInfoViewController	12
RoutesViewController	14
SettingsViewController	15
SyncDataViewController	15
ViewController	16
ViewController()	16

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

AppDelegate	7
AppDelegate()	7
BTDiscover	
Class responsible for finding and connecting/disconnecting peripheral	7
BTSendRec	
Class responsible for doing the data transmission to the connected peripheral	9
BTSendRec()	11
Database	
Database manager class	11
RouteInfoViewController	12
RouteInfoViewController()	13
RoutesViewController	14
RoutesViewController()	14
SettingsViewController	15
SettingsViewController()	15
SyncDataViewController	15
SyncDataViewController()	16
ViewController	16
ViewController()	16

Chapter 3

InPace/InPace/ ViewController.h	??

Chapter 4

Class Documentation

4.1 AppDelegate Class Reference

Inheritance diagram for AppDelegate:

The documentation for this class was generated from the following file:

- InPace/InPace/AppDelegate.h

4.2 AppDelegate() Category Reference

The documentation for this category was generated from the following file:

- InPace/InPace/AppDelegate.m

4.3 BTDiscover Class Reference

Class responsible for finding and connecting/disconnecting peripheral.

```
#import <BTDiscover.h>
```

Inheritance diagram for BTDiscover:

Instance Methods

- (void) - [scanForWristband](#)

- (void) - [centralManagerDidUpdateState:](#)
- (void) - [centralManager:didDiscoverPeripheral:advertisementData:RSSI:](#)
- (void) - [centralManager:didConnectPeripheral:](#)
- (void) - [centralManager:didDisconnectPeripheral:error:](#)

Properties

- [BTSendRec](#) * [wristband](#)
- CBCentralManager * [manager](#)
- CBPeripheral * [bt_periph](#)

4.3.1 Detailed Description

Class responsible for finding and connecting/disconnecting peripheral.

This class is largely a wrapper around the CBCentralManager class and also acts as its delegate object. As such, many of its functions are implemented so the class conforms to the [CBCentralManagerDelegate](#) protocol.

4.3.2 Method Documentation

4.3.2.1 - (void) centralManager: (CBCentralManager*) *central* didConnectPeripheral:(CBPeripheral*) *peripheral*

This function is called when a peripheral was successfully connected to by our CBCentralManager object. Part of the CBCentralManagerDelegateProtocol.

Parameters

<i>central</i>	The CBCentralManager object
<i>peripheral</i>	The peripheral that just got connected

4.3.2.2 - (void) centralManager: (CBCentralManager*) *central* didDisconnectPeripheral:(CBPeripheral*) *peripheral* error:(NSError*) *error*

This function is called when a peripheral has disconnected. Part of the [CBCentralManagerDelegate](#) protocol.

Parameters

<i>central</i>	The central manager object
<i>peripheral</i>	The peripheral that has been disconnected
<i>error</i>	The cause of failure, if any

4.3.2.3 - (void) centralManager: (CBCentralManager*) *central* didDiscoverPeripheral:(CBPeripheral*) *peripheral* advertisementData:(NSDictionary*) *advertisementData* RSSI:(NSNumber*) *RSSI*

This function is called when a peripheral was discovered during scanning by the CBCentralManager object. Part of the [CBCentralManagerDelegate](#) protocol.

Parameters

<i>central</i>	The central manager object
<i>peripheral</i>	The discovered peripheral

<i>advertisement-Data</i>	The advertisement data (if any)
<i>RSSI</i>	The signal strength

4.3.2.4 - (void) centralManagerDidUpdateState: (CBCentralManager*) *central*

This function is called whenever the CBCentralManager object changes its state. This function is required by the [CBCentralManagerDelegate](#) protocol.

Parameters

<i>central</i>	The central manager object
----------------	----------------------------

4.3.2.5 - (void) scanForWristband

Initiate scan for the InPace wristband

4.3.3 Property Documentation

4.3.3.1 - (CBPeripheral*) *bt_periph* [read], [write], [atomic], [strong]

Pointer to the discovered Bluetooth peripheral

4.3.3.2 - (CBCentralManager*) *manager* [read], [write], [atomic], [strong]

Pointer to the internal central manager object

4.3.3.3 - (BTSendRec*) *wristband* [read], [write], [nonatomic], [strong]

Pointer to class to handle sending and receiving data to and from the Bluetooth peripheral

The documentation for this class was generated from the following files:

- InPace/InPace/BTDiscover.h
- InPace/InPace/BTDiscover.m

4.4 BTSendRec Class Reference

Class responsible for doing the data transmission to the connected peripheral.

```
#import <BTSendRec.h>
```

Inheritance diagram for BTSendRec:

Instance Methods

- (void) - [writeFile:toDatabase:](#)
- (double) - [distance:secondPoint:](#)
- (int) - [time:endTime:](#)

4.4.1 Detailed Description

Class responsible for doing the data transmission to the connected peripheral.

This class is largely a wrapper around CBPeripheral and also acts as its delegate object. As such, many functions are implemented so the class conforms to the [CBPeripheralDelegate](#) protocol.

4.4.2 Method Documentation

4.4.2.1 - (double) distance: (double*) p1 secondPoint:(double*) p2

This function uses the Haversine Formula to compute the distance between two pairs of GPS coordinates. Both input parameters are assumed to be arrays of doubles of the form [Latitude, Longitude], both of which are in degrees.

Parameters

<i>p1</i>	An array of doubles of size 2 containing a pair of GPS coordinates
<i>p2</i>	An array of doubles of size 2 containing a pair of GPS coordinates

Returns

The function returns the calculated distance between the two points

4.4.2.2 - (int) time: (int*) start endTime:(int*) end

This function computes the difference between two timestamps. Both paramaters are assumed to be arrays of doubles of the form [Year, Month, Day, Hour, Minute, Second].

Parameters

<i>start</i>	An array of ints of size 6 containing time information
<i>end</i>	An array of ints of size 6 containing time information

Returns

The function returns the difference bewtween the two times in seconds

4.4.2.3 - (void) writeFile: (NSString*) filename toDatabase:(Database*) db

Parameters

<i>filename</i>	The name of the file whose content is to be parsed and placed into a database
<i>db</i>	The database where the data will be stored

The documentation for this class was generated from the following files:

- InPace/InPace/[BTSendRec.h](#)
- InPace/InPace/[BTSendRec.m](#)

4.5 BTSendRec() Category Reference

The documentation for this category was generated from the following file:

- InPace/InPace/BTSendRec.m

4.6 Database Class Reference

[Database](#) manager class.

```
#import <Database.h>
```

Inheritance diagram for Database:

Instance Methods

- (instancetype) - [init_dbfile:](#)
- (int) - [query:](#)

Properties

- NSString * [file](#)
- NSMutableArray * [results](#)
- NSMutableArray * [columns](#)
- long long int [last_rowid](#)

4.6.1 Detailed Description

[Database](#) manager class.

This class maintains an SQLITE database to hold the various Routes, Coordinates, and Times.

4.6.2 Method Documentation

4.6.2.1 -(instancetype) init_dbfile: (NSString*) filename

Initialization function for the [Database](#) object. The [Database](#) will use the file given by filename to store and load its data.

Parameters

<i>filename</i>	The name of the file to use as the database file
-----------------	--

Returns

A pointer to the newly created [Database](#) object is returned

4.6.2.2 - (int) query: (NSString*) query

The main function of the database. This function takes an SQL statement given by query and executes it on the database. If the statement executed was a SELECT statement, then the results will be stored in the arrays results and columns. Any other statement will simply result in these two arrays being empty. query() returns a status code from the SQLITE3 library to indicate the success of the statement.

Parameters

<i>query</i>	The desired SQLITE statement to be executed
--------------	---

Returns

An SQLITE3 result code indicating the status of the statement

4.6.3 Property Documentation

4.6.3.1 - (NSMutableArray*) columns [read], [write], [atomic], [retain]

Array to hold names of columns in result

4.6.3.2 - (NSString*) file [read], [write], [atomic], [retain]

Name of database file

4.6.3.3 - (long long int) last_rowid [read], [write], [atomic], [assign]

RowID of the last thing inserted into the database

4.6.3.4 - (NSMutableArray*) results [read], [write], [atomic], [retain]

Array to hold query results

The documentation for this class was generated from the following files:

- InPace/InPace/Database.h
- InPace/InPace/Database.m

4.7 RouteInfoViewController Class Reference

```
#import <RouteInfoViewController.h>
```

Inheritance diagram for RouteInfoViewController:

Instance Methods

- (void) - [loadRouteData](#)

Properties

- IBOutlet MKMapView * [mapView](#)
- long long int [routeID](#)
- Database * [dbManager](#)
- NSMutableArray * [arrRouteCoord](#)

4.7.1 Detailed Description

[ViewController](#) for viewing map and graph representation of individual route data

4.7.2 Method Documentation

4.7.2.1 - (void) loadRouteData

Method for pulling individual route coordinates based on the routeID

4.7.3 Property Documentation

4.7.3.1 - (NSMutableArray*) arrRouteCoord [read], [write], [nonatomic], [strong]

array for holding route coordinates from DB

4.7.3.2 - (Database*) dbManager [read], [write], [nonatomic], [strong]

instance of [Database](#)

4.7.3.3 - (IBOutlet MKMapView*) mapView [read], [write], [nonatomic], [retain]

Map View

4.7.3.4 - (long long int) routeID [read], [write], [nonatomic], [assign]

holds ID of current route

The documentation for this class was generated from the following files:

- InPace/InPace/RouteInfoViewController.h
- InPace/InPace/RouteInfoViewController.m

4.8 RouteInfoViewController() Category Reference

The documentation for this category was generated from the following file:

- InPace/InPace/RouteInfoViewController.m

4.9 RoutesViewController Class Reference

Inheritance diagram for RoutesViewController:

The documentation for this class was generated from the following file:

- InPace/InPace/RoutesViewController.h

4.10 RoutesViewController() Category Reference

Inheritance diagram for RoutesViewController():

Instance Methods

- (void) - [loadData](#)

Properties

- IBOutlet UITableView * [tblRoutes](#)
- Database * [dbManager](#)
- NSMutableArray * [arrRoutesInfo](#)
- long long int [routeID](#)

4.10.1 Detailed Description

[ViewController](#) for viewing all routes in a tableview, option to click on route and view more info

4.10.2 Method Documentation

4.10.2.1 - (void) loadData

Method for loading data from database and putting it into the tableview

4.10.3 Property Documentation

4.10.3.1 - (NSMutableArray*) arrRoutesInfo [read], [write], [nonatomic], [strong]

array for holding info of all routes in DB

4.10.3.2 - (Database*) dbManager [read], [write], [nonatomic], [strong]

instance of database

4.10.3.3 - (long long int) routeID [read], [write], [nonatomic], [assign]

holds ID of current route

4.10.3.4 - (IBOutlet UITableView*) tblRoutes [read], [write], [nonatomic], [weak]

table view

The documentation for this category was generated from the following file:

- InPace/InPace/RoutesViewController.m

4.11 SettingsViewController Class Reference

Inheritance diagram for SettingsViewController:

The documentation for this class was generated from the following file:

- InPace/InPace/SettingsViewController.h

4.12 SettingsViewController() Category Reference

The documentation for this category was generated from the following file:

- InPace/InPace/SettingsViewController.m

4.13 SyncDataViewController Class Reference

Inheritance diagram for SyncDataViewController:

The documentation for this class was generated from the following file:

- InPace/InPace/SyncDataViewController.h

4.14 SyncDataViewController() Category Reference

Properties

- IBOutlet UITextView * [testTextView](#)
- [BTDiscover](#) * [discover](#)

4.14.1 Detailed Description

SyncDataViewController.mViewController for showing bluetooth data after syncing

4.14.2 Property Documentation

4.14.2.1 - ([BTDiscover*](#)) [discover](#) [read], [write], [atomic], [strong]

instance of [BTDiscover](#), to discover peripherals

4.14.2.2 - (IBOutlet UITextView*) [testTextView](#) [read], [write], [nonatomic], [weak]

textView for showing data

The documentation for this category was generated from the following file:

- InPace/InPace/SyncDataViewController.m

4.15 ViewController Class Reference

Inheritance diagram for ViewController:

The documentation for this class was generated from the following file:

- InPace/InPace/ViewController.h

4.16 ViewController() Category Reference

4.16.1 Detailed Description

[ViewController](#) for home page

The documentation for this category was generated from the following file:

- InPace/InPace/ViewController.m

Chapter 5

File Documentation

5.1 InPace/InPace/BTSendRec.h File Reference

Bluetooth send and receive functionality.

```
#import <Foundation/Foundation.h>
#import <CoreBluetooth/CoreBluetooth.h>
#import <math.h>
#import <time.h>
#import "Database.h"
```

Classes

- class [BTSendRec](#)

Class responsible for doing the data transmission to the connected peripheral.

Macros

- #define [BLE_UUID](#) [CBUUID UUIDWithString: @"713D0000-503E-4C75-BA94-3148F18D941E"]
- #define [RX_UUID](#) [CBUUID UUIDWithString: @"713D0002-503E-4C75-BA94-3148F18D941E"]
- #define [TX_UUID](#) [CBUUID UUIDWithString: @"713D0003-503E-4C75-BA94-3148F18D941E"]
- #define [RWT_BLE_SERVICE_CHANGED_STATUS_NOTIFICATION](#) @"stuff goes here"
- #define [RADIUS](#) 6371000
- #define [PI](#) 3.1415926
- #define [to_rad](#)(x) ((double) x * [PI](#) / 180)

5.1.1 Detailed Description

Bluetooth send and receive functionality. This file defines the necessary functions and macros to handle reading data from the InPace wristband, parsing it, submitting it to the database, reading values out of the database, and sending the necessary data to the wristband.

5.1.2 Macro Definition Documentation

5.1.2.1 #define BLE_UUID [CBUUID UUIDWithString: @"713D0000-503E-4C75-BA94-3148F18D941E"]

This macro expands to a CBUUID object that represents the UUID of the Bluetooth shield used in the InPace wristband.

5.1.2.2 `#define PI 3.1415926`

This macro expands to the value of pi.

5.1.2.3 `#define RADIUS 6371000`

This macro expands to the mean radius of the Earth in meters.

5.1.2.4 `#define RWT_BLE_SERVICE_CHANGED_STATUS_NOTIFICATION @"stuff goes here"`

No idea what this does or why it's here, honestly...

5.1.2.5 `#define RX_UUID [CBUUID UUIDWithString: @"713D0002-503E-4C75-BA94-3148F18D941E"]`

This macro expands to a CBUUID object that represents the UUID of the Read characteristic on the Bluetooth shield.

5.1.2.6 `#define to_rad(x) ((double) x * PI / 180)`

This macro takes the value x and converts it into radians.

5.1.2.7 `#define TX_UUID [CBUUID UUIDWithString: @"713D0003-503E-4C75-BA94-3148F18D941E"]`

This macro expands to a CBUUID object that represents the UUID of the Write characteristic on the Bluetooth shield.
